

ANTONIE VAN LEEUWENHOEK

Antonie van Leeuwenhoek was a Dutch scientist who was the first to see bacteria under a microscope. He made over 500 lenses to use in a homemade microscope.

His research laid the foundation for the field of bacteriology. The first representation of bacteria are his scientific drawings from a publication in 1683.

This is a page from *Bacteria and Me*, a microbiology coloring book by Aedan Gardill and Tiffany Harris, and is funded by the Marie Christine Kohler fellowship.
