

## PNEUMONIA

Pneumonia is an inflammation of the lungs due to infection. Some symptoms of pneumonia include cough, fever, shortness of breath, chest pain, nausea, vomiting, and confusion. Pneumonia can be caused by a number of microbes: from fungi to viruses to bacteria. The most common bacterial infection for adults is from *Streptococcus pneumoniae*, and bacterial pneumonia is often very serious and may require medical intervention.

This is a page from *Bacteria and Me*, a microbiology coloring book by Aedan Gardill and Tiffany Harris, and is funded by the Marie Christine Kohler fellowship.
