

## ***SALMONELLA ENTERICA***

*Salmonella enterica* is a rod-shaped bacterium that causes an illness known as salmonellosis, that often results in diarrhea, fever, and stomach cramps. Some infections with *Salmonella* are so severe they require hospitalization; however, most infections clear on their own without medical intervention. Infections are obtained from eating contaminated foods or by touching infected animals.

This is a page from *Bacteria and Me*, a microbiology coloring book by Aedan Gardill and Tiffany Harris, and is funded by the Marie Christine Kohler fellowship.
